

The system matches the student with the supervisors based on their classes and what they need therefore creating a comfortable space for the student for them to interact for supervisors most suitable for them

The system generates reports on how the supervisors and students were reacting to look into the progress of the relationship and how their interaction has been going through out the semester

The system also allows the students to make request appointments so they can interact with the professors and see what time they are available to see their supervisors

The admins also make sure that any problem that arises in student accounts is solved so the students can have the best experience ever
